# Publish From Code, Openly.

- ▶ Transparency → verifiability.
- ▶ Reproducibility → hackability.
- ▶ Version management support:
  - ▶ `diff`-ability.
  - ▶ `blame`-ability.

# Publish in a Distributed Model, Free.

- ▶ No entry barrier → citizen science.
- ▶ No institutional bias → free science.
- ▶ *Less* publication bias → honest science.
- ▶ “Direct Market Access”.

# Publish, in a Presentable Format.

- ▶ Article.
- ▶ Poster.
- ▶ Slides.

(“Notebooks” integrate poorly with both presentation and development.)

```

  pytex_fig('scripts/radar.py',  
    label='radar',  
    caption='A radar plot.',  
  )  
}
```

# Typesetting the Previous Table

# The Framework Topology

- ▶ Reduced information duplication.
- ▶ Continuous development support.

## The Workflow

- ▶ Asynchronous offloading for time-consuming analysis.
- ▶ Separate packaging for deep analysis stacks.

# Minimal First-Level Dependencies

```
dev-python/matplotlib  
dev-python/numpy  
dev-python/pandas  
dev-python/seaborn  
dev-python/pygments  
>=dev-python/statsmodels-0.9.0  
>=dev-tex/latex-beamer-3.41  
>=dev-tex/pythontex-0.16
```

Following the Package Manager Standard (PMS):

- ▶ Because dependency graphs should never be managed ad hoc.

# Co-Author the Reference Implementation

- ▶ The `article.tex` reference document is still in early draft.
- ▶ You can contribute, fork, and publish it however you want.
